Mangrove Tourism program

- Lichen diversity included in tourism development

15 LIFE
ON LAND

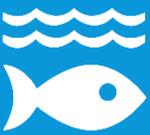

- **SDG 15.2.3**

This project determined the diversity and distribution of lichen in mangrove areas of Banpakpaya village, Nakhon Si Thammarat province. The result of the study provided information on the current local resources which was beneficial to maintaining the current ecosystems' biodiversity in the mangrove area of Nakhon Si Thammarat.

- **SDG 15.2.5 and SDG 15.3.3**

The researcher advised and supported Banpakpaya villagers in developing and promoting the lichen survey activity in the mangrove tourism program.

14 LIFE
BELOW WATER

- **SDG 14.2.2 and SDG 17.4.3**

The researcher supported the villagers with a basic knowledge of a lichen survey in the mangrove area. The infographic of the lichen survey and lichen species in the mangrove area was also provided at the learning center of a community of Banpakpaya local fisheries. Moreover, the researcher also gave a basic concept of sustainable management of fisheries and tourism to promote the conservation awareness of the villagers.
