The Academic Service Center therefore cooperates with Walailak University's health service agencies, namely Walailak University Medical Center Hospital. and the School of Health Sciences, 5 branches, including the School of Nursing School of Medicine School of Allied Health Sciences School of Pharmacy, and the School of Public Health Participate in implementing projects to provide health services to underprivileged groups and refugees or immigrants. who lives in Hua Taphan Subdistrict and Thai Buri Subdistrict, Tha Sala District, Nakhon Si Thammarat Province to receive health care To have a better life The work is carried out in the community in collaboration with community health network partners, including Thai Buri Subdistrict Service Organization Hua Taphan Subdistrict Administrative Organization Ban Han Subdistrict Health Promoting Hospital Walailak Phatthana Community Demonstration Community Health Promoting Hospital Village Health Volunteers (Village Health Volunteers), Thai Buri Subdistrict Ban Thung Chon Subdistrict Health Promoting Hospital and village health volunteers (VHVs) in Hua Taphan Subdistrict join together to care for these underprivileged groups and refugees or immigrants. The activities in the project are to provide services to meet the needs of health services for groups and refugees or immigrants and receive the opportunity to promote health on a basis consistent with the needs of the age group. Live a good life based on basic needs. While living in Thailand.

The project implementation process begins with assessing the health status of disadvantaged groups and refugees or immigrants. Using a health assessment form according to age group, summarize and analyze the results of health assessments and present them to relevant parties for joint health promotion work. By organizing a forum to design support with network partners at all levels, we have cooperated to ensure that underprivileged groups, refugees, or immigrants have a good lifestyle according to their health status with health promotion mechanisms according to their birth age group, well-being. According to Sustainable Development Goal 3: good health, and promote well-being for everyone at every age, together with strengthening the cooperation mechanism of support network partners according to Sustainable Development Goal 17: Partnerships to achieve the Goal. Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development. Live a good life based on your needs while living in Thailand.

The results found that disadvantaged groups and refugees or immigrants 26 people participated in the project with 97% satisfaction. They were very satisfied that they had the potential to take care of themselves and their families according to their health status. Livelihood is improved by having network partners involved in taking care of underprivileged groups and refugees or immigrants. There are also nursing students who volunteer in health promotion activities for underprivileged groups and refugees or immigrants in teaching community psychiatric nursing. Integrate teaching and learning with academic services, social service, and research. The activities in the project are to provide services to meet the needs of health services for groups and refugees or immigrants and receive the opportunity to promote health on a basis consistent with the needs of the age group. There will be nursing professors who have experience in conducting academic projects to serve society as part of a working team and providing consultation as well as applying the knowledge gained to further develop spatial work as well as develop research questions. Respond to health service needs for disadvantaged groups and refugees or immigrants. Receive the opportunity to promote health on a basic basis consistent with the needs of the age group. Live a good life based on your needs while living in Thailand.
